A woman in a white sweater and blue jeans is pointing at a display case containing historical documents. A young girl in a dark jacket and purple boots is looking at the documents. Another person in a green jacket is partially visible on the right. The display case is mounted on a white wall, and the floor is made of light-colored wood.

DoJ seeks means to hack anonymizing technologies  
[s3.documentcloud.org/documents/1347...](https://s3.documentcloud.org/documents/1347...)  
via @guardian

The Department of Justice recommends an amendment to Rule 41 of the Federal Rules of Criminal Procedure to update the provisions relating to the territorial limits for searches of electronic storage media. The amendment would establish a court-supervised framework through which law enforcement can successfully investigate and prosecute sophisticated Internet crimes, by authorizing a court in a district where activities related to a crime have occurred to issue a warrant – to be executed via remote access – for electronic storage media and electronically stored information located within or outside that district. The proposed amendment would better enable law enforcement to investigate and prosecute botnets and crimes involving Internet anonymizing technologies, both which pose substantial threats to members of the public.

Kevin Poulsen FOIA gets docs on FBI classified Internet spy tool CIPAV [s3.documentcloud.org/documents/1347...](https://s3.documentcloud.org/documents/1347...) (172 pages)

28 request that an activating computer respond to the CIPAV by sending network level  
1 messages, and/or other variables, and/or registry information, over the Internet<sup>7</sup> to a  
2 computer controlled by the FBI. The exact nature of these commands, processes,  
3 capabilities, and their configuration is classified as a law enforcement sensitive  
4 investigative technique, the disclosure of which would likely jeopardize other on-going  
5 investigations and/or future use of the technique. As such, the property to be accessed  
6 by the CIPAV request is the portion of the activating computer that contains  
7 environmental variables and/or certain registry-type information; such as the  
8 computer's true assigned IP address, MAC address, open communication ports, list of  
9 running programs, operating system (type, version, and serial number), internet  
10 browser and version, language encoding, registered computer name, registered
